

Project 4 — Clue Sheet

Prioritization — the clues point the way, the answer is your work. No Priya needed.

THE PROBLEM

Arjun, VP of Sales, wants a 40-lakh custom feature for ONE client. Meanwhile 18,000 small merchants want a faster day-end summary. The loudest voice versus the largest need.

WHAT TO PRODUCE

A **prioritized roadmap** — RICE-scored, organised Now-Next-Later, with one explicit paragraph that says no to Arjun. Work each one out from the clues below — fill every blank yourself.

1

Work out your FEATURE LIST

Clue: Do not start scoring yet. First list ten to fifteen candidate features — including Arjun's. Use your Week 2 research as the evidence for reach.

Write it > Candidate features = _____ (10-15 of them)

2

Work out the RICE SCORES

Clue: Score every feature: Reach times Impact times Confidence, divided by Effort. Be honest — pull real numbers, do not inflate the ones you like. Guessing? Confidence is 50%.

Write it > $RICE = (Reach \times Impact \times Confidence) / Effort$ — for each feature

3

Work out NOW-NEXT-LATER

Clue: Sort by RICE score. Then place features into Now (this cycle), Next (after, roughly defined), Later (themes, no dates) — by team capacity.

Write it > Now = _____ Next = _____ Later = _____

4

Work out the NO

Clue: One paragraph to Arjun — not a flat no. Name the trade-off, show the RICE scores, leave the door open.

Write it > No = the trade-off + both RICE scores + 'bring more data and we re-score.'

The clues give you the method; the judgement is your work. That is the whole skill of Project 4.
