

Project 6 — Clue Sheet

UX Critique — the clues point the way, the answer is your work. No Priya needed.

THE PROBLEM

The PixelPay payment-collection screen is live, but support tickets keep coming. Many merchants are kirana owners over 40, on cheap phones, in bright sunlight.

WHAT TO PRODUCE

A **UX critique + accessibility audit** of the payment-collection flow. Work each one out from the clues below — fill every blank yourself.

1

Work out the FLOW WALK

Clue: Use the product like a real merchant — screen by screen, tap by tap. At each step ask: does it tell me what is happening, does it speak my language, can I make a mistake here.

Write it > Issues found, step by step = _____

2

Work out the HEURISTIC MAP

Clue: Do not list opinions. Map each issue to one Nielsen heuristic — system status, real-world match, error prevention, recognition over recall.

Write it > Issue = _____ -> violates [heuristic] -> fix = _____

3

Work out the ACCESSIBILITY PASS

Clue: Switch persona — a 55-year-old kirana owner in sunlight. Check four things: colour contrast, tap-target size, text size, plain language.

Write it > A11y flags = contrast ____, tap target ____, text ____, language ____

4

Work out the WRITE-UP

Clue: Every finding needs a named principle and a concrete fix. Group it: usability issues first, then the accessibility pass.

Write it > Critique = issues + heuristics + fixes, then the a11y pass.

The clues give you the method; the judgement is your work. That is the whole skill of Project 6.
